

KONICA MINOLTA

ENTERPRISE SEARCH

✦ Take control of enterprise information and content:
Fast, one-click retrieval of searched content

**MANAGED
CONTENT SERVICES**

CAPTURE AND MANAGE ENTERPRISE INFORMATION

The flood of information and data we are confronted with today is greater than ever, which also makes it more difficult for knowledge workers to quickly find the information they require. Lengthy searches for specific documents can quickly turn into a time-consuming and costly liability that binds manpower and will eventually have a negative impact on your company's competitiveness.

In this scenario, Konica Minolta's enterprise search software is just the solution for you to find relevant data and information without delay. The application's high-performance, searchable index gives you and your team instant access precisely to what you are looking for – just type in your keywords in the search bar and access different data silos from there. No matter where the information you're looking for resides – in e-mail attachments, scanned documents, on SharePoint sites, your company intranet, or across departmental application silos – this out-of-the-box enterprise search tool locates and retrieves any type of data, in any format, from any repository.

data silo, such as e-mail attachments, scanned files, Notes databases, CRM records and Cloud apps – without ever needing to log out or switch to any other app.

Leave your data where it is

Don't hesitate to leave your data where it currently lives! Our enterprise search software finds and indexes all data in your existing data silos and extracts content from any of your company's data stores in real time – regardless of format, structure, application or location.

Be as secure as ever

Konica Minolta's search software complies with whatever security scheme your company already has in place. This way you can rely on every user only gaining access to the content he/she is authorised to see.

Simply scale up when needed

Any data and information that you may want to include later on can easily be added at any time, independently of where it is stored.

Let the search engine do the work

The Konica Minolta search engine automatically integrates all your data into a Universal Index. No massive data migration or specific integration projects are necessary.

Take advantage of automatic content conversion

Our enterprise search software goes beyond just capturing metadata and file names. Its optical character recognition technology looks deep inside each file, accurately converting text and every kind of content. It also indexes everything, thus making your document content accessible for later searches.

Benefit from universal data access

Eliminating data silos, all corporate information is automatically carried forward into a single user interface. This you can conveniently access via your company intranet using any device. Start your search from inside SharePoint or your desktop. You will see all relevant files and data from all SharePoint sites as well as related data "hiding" in any

Your benefits at a glance

- **Single point of access**
Log in just once and simultaneously search with the keywords of your choice across dozens of different data repositories. Fast one-click retrieval lets you access and open original source documents without knowing the file name or logging into the target app.
- **Total visibility**
Powerful OCR technology allows you to search deep inside each file precisely for your required content.
- **Works the way you do**
You don't need to adopt new methods for saving and tagging; Just leave files and data where they currently reside; the solution will find and index your data, no matter where it's hiding.
- **Incorporates external file stores**
- **No need to migrate your content**
The Konica Minolta enterprise search software indexes everything right where it is.
- **Secure access only to authorised documents**
Complies with whatever security scheme your company has in place.
